

RFID ENTERPRISE SERVER

Product Datasheet

RFID ENTERPRISE SERVER

7iD RFID Enterprise Server is software for managing RFID and AUTO-ID infrastructures.

RFID Enterprise Server is specially designed for creating and altering RFID and auto-id infrastructures using a central enterprise dashboard. Monitoring features also offer a comprehensive overview of infrastructure operation status .

The server also has an EPCglobal EPCIS compliant database application featuring an enterprise-level data repository.

CONFIGURATION FEATURES

Hardware configuration	RFID readers, printers barcode and mobile devices sensors, enterprise server
Logical configuration	Data Sources Logical Readers Readpoints
Filtering configuration	Cross-read False-positive-reads reflectance EPC, RSSI

MONITOR FEATURES

Hardware monitoring	RFID readers, printers barcode and mobile devices sensors, enterprise applications
Alarm monitoring	Create and change alarm workflow Alarm notifications via SMS/ email
Log monitoring	View log messages

EPCIS DATA REPOSITORY

EPCIS Features	EPCglobal EPCIS compliant
Database	Local and remote databases

SYSTEM SPECIFICATIONS

Accessibility	User and role management
Delivery	VMware Image appliance
Compliance	Support for RNC 1.2

LICENSE INFORMATION

License Model	For each auto-id device
License	Included in Device Agent license

ORDER INFORMATION

Product number	555.01000
Product name	RFID Enterprise Server

KEY FEATURES

- Configure RFID and auto-id hardware
- Define logical objects
- Optimize read rates by specifying filter objects
- Create and change alarm configurations
- View data at multiple levels
- Verify data by tuning filter objects
- View operational hardware status
- Control readers, printers and sensors
- Manage alarm notifications
- Support for service tasks
- EPCIS compliant data repository
