## for value added TETRA Apps

TetraPro is a software for building and managing a large amount of value added applications based on your existing TETRA network.

TetraPro communicates with multiple data sources provided by the police and public administration. The software offers valuable real time information through an intuitive and easy to use interface.

In addition to the locationing functionality there are many more application modules available: vehicle license plate search, ID card and passport verification, authenticate evidence of emergency alerts. Due to GPS, you gain transparency about the current location of your TETRA devices.

Furthermore, it helps you transform vast amounts of data into valuable information for TETRA end users. TetraPro provides interoperability and data integrity with increased security in internal and external communications, keeping your data safe within all applications.

### Possible Applications

- > GPS / AVL Applications
- > Vehicle license plate search and recognition
- > ID Card and Passport verification
- > Authenticate evidence of emergency alerts
- > Mobile workspace
- > Secure transportation of electronic documents

### Why eGovernment standards

- > Increased security in internal and external communication and processes
- > Applications development uses defined middleware technology security standards
- > Compliance with recommendations on software architecture methods for data and process modeling and specifications for a secure infrastructure

### Key benefits

- > Unique application environment
- > Access control
- > Audit logging
- > Permission management
- > Overload protection for application generated TETRA traffic – Voice traffic prevails!

### Key features

- > Data transmission reduces the need for voice calls, conserving valuable bandwidth
- > Fast and reliable access to critical information when you need it most
- > Offers partnership with local partners
- > Easy adoption to local requirements
