7iD TetraPro

for value added TETRA Apps

7iD TetraPro is a software for building and managing large amounts of value added applications based on your existing TETRA network. TetraPro communicates with multiple data sources provided by the police and public administration. The software offers valuable real-time information through an intuitive and easy-to-use interface.

In addition to the localization functionality are many more application modules available: vehicle license plate search, ID card and passport verification, authenticate evidence of emergency alerts. Due to GPS, additional transparency about the current location of your TETRA devices is being generated.

Furthermore, it helps you transform vast amounts of data into valuable information for TETRA end users. TetraPro provides interoperability and data integrity with increased security in internal and external communication – keeping your data safe within all applications.

Why eGovernment standards?

- > Increased security in internal and external communication and processes
- > Application development uses defined middleware technology security standards
- > Compliance with recommendations on software architecture methods for data and process modeling and specifications for a secure infrastructure

Possible Applications?

- > GPS / AVL applications
- > Vehicle license plate search and recognition
- > ID card and passport verification
- > Authenticate evidence of emergency alerts
- > Mobile workspace
- > Secure transmission of electronic documents

Key Benefits

- > Unique application environment
- > Access control
- > Audit logging
- > Permission management
- > Overload protection for application-generated TETRA traffic – voice traffic prevails!

Key Features

- > Data transmission reduces need for voice calls, conserving valuable bandwidth
- > Fast and reliable access to critical information when you need it most
- > Offers partnership with local associates
- > Easy adoption to local requirements
